

Annex of the Country Development Cooperation Policy(or the Country Assistance Policy)

Rolling Plan for Papua New Guinea

As of April 2024

Basic Policy of Assistance	Achievement of "high quality growth" and improvement of the living standard of Papua New Guinea by strengthening socio-economic foundation
----------------------------	--

Priority Area 1	Strengthening the Foundation for Economic Growth
-----------------	--

Development issue 1-1 Development and Maintenance of the Socio-Economic Infrastructure	[Background and current situation] In Papua New Guinea (hereinafter referred to as "PNG"), there are many islands and mountainous areas, and in addition to underdeveloped transportation and communication infrastructure, basic infrastructures (such as electricity, energy, and water) are inadequate. Furthermore, a lack of access to social services hindered due to traditional inter-tribal conflicts in rural areas and deterioration of security risk caused by demand-supply gaps in labor market in urban areas inhibits income growth. Particularly, underdeveloped transportation infrastructure results in high transportation costs for goods, contributing to rising prices. Additionally, existing infrastructures are not adequately maintained, making it vulnerable to frequent natural disasters. Therefore, there is a need to improve infrastructure that supports the livelihoods of the population and various industries within the country, enhance that capacity for maintenance and management, and restore the security situation.			[Strategy] Through the development and maintenance of essential infrastructure for livelihoods and economic activities, such as transportation (bridges, roads, ports, airports) and power and energy (including renewable energy, power plants, and transmission/distribution networks), Japan will promote sustainable economic growth of Papua New Guinea. Furthermore, efforts to coordinate aid have been advancing, and through information exchange and sharing with other donors, Japan aims to achieve more efficient and effective infrastructure development. In addition, Japan will support the restoration of the security situation through assistance to the country's police force, as well as promote land registration and provide support for strengthening governance by the government.

Development issue 1-2 Expansion of the Economic Activity	[Background and current situation] The mineral resources industry has developed due to abundant natural resources, while in rural areas where 85% of the population lives, a subsistence lifestyle is generally maintained, and the primary industries dominate, with manufacturing still underdeveloped. Additionally, in rural areas with poor transportation access, there is insufficient improvement in agricultural technology and limited opportunities for selling agricultural products in markets, leaving residents in a harsh living situation. Therefore, efforts are needed to expand economic activities and promote social stability, focusing on infrastructure development, investment promotion, creating a conducive environment for business development, and fostering technical personnel to generate employment opportunities.			[Strategy] Japan aims to promote efficient and effective development, targeting sustainable economic growth, by supporting trade and investment promotion, the streamlining of economic assistance, and providing support that contributes to social stability necessary for the development of various sectors. Also, while considering the sustainability of agriculture, forestry, and fisheries, Japan will strengthen the living foundation in rural areas, where the majority of the population resides, through support for income expansion and other initiatives that promote industries and commerce, including agriculture, forestry, and fisheries. In cooperation related to the development of trade and investment environments with a focus on the expansion of activities by the Japanese companies, Japan will particularly promote the training of human resources who take roles in PNG's industries, strengthening of quality control systems, and participatory development led by local community residents.

Priority Area 2		Addressing Social Disparities in Areas including Education and Healthcare														
Development issue 2-1 Strengthening of Function and Capacity Building in the Education	[Background and current situation] Since the implementation of the government's free education policy in 2012, enrollment rates have been improving. However, with the increase in the number of students, the number of children per classroom has also surged, presenting significant challenges to the quality of education. Although a shift has been made from a performance-based education system to a standards-based education approach, there is an urgent need to develop curricula that align with the new policy, create educational materials, provide teacher training, and revise assessment methods. Also, there is a critical shortage of skilled personnel to support industries, which is closely linked to the issues in basic education.						[Strategy] In the education sector, aligning with the National Education Plan 2020-2029, Japan will promote the strengthening of education systems and human resource development through support for improving the quality of primary and secondary education, enhancing educational facilities, and expanding higher education and technical training. The PNG government aims to "achieve quality education for all students," with a focus on primary and secondary education while also working on initiatives that lead to the training of skilled technicians. Also, Japan will consider the support in alignment with a sector approach, particularly led by Australia, whereas utilizes other schemes such as grassroots and human security grant aid.

		Development issue 2-2 Improvement of Health and Medical Service	[Background and current situation] In rural areas, due to the shortage of healthcare staff, aging facilities, and a lack of medicines and operational budgets, some or all medical facilities have been closed, leading to inadequate healthcare services and a low vaccination rate. As a result, outbreaks of infectious diseases and high mortality rates among infants and pregnant women remain a serious issue. Therefore, it is urgent to focus on improving healthcare and medical services through the development of medical facilities and equipment, the provision of sufficient local healthcare personnel, and the enhancement of their technical skills.						[Strategy] In the health sector, aligning with the National Health Plan 2021-2030, Japan will promote the maintenance and enhancement of health by supporting improvements in the healthcare system, infectious disease control, and the development of local healthcare personnel. Japan will also collaborate with volunteer dispatch programs, the provision of medical equipment, and grassroots grant aid initiatives. Additionally, efforts to provide training opportunities will be made to improve the quality of healthcare services and spread knowledge on preventive healthcare.

	Dispatch Volunteers in Health sector		JOCV							-	-					
	Development issue 3-1 Environment Conservation		[Background and current situation] The development of natural resources and the influx of population into urban areas have raised concerns about the deterioration of the natural and living environments. In particular, due to the lack of environmental infrastructure, implementation of measures to tackle waste management and wastewater treatment in urban areas have been delayed. As a result, there is an urgent need to strengthen efforts such as upgrading waste disposal sites and improving waste collection efficiency, as well as developing sewer systems. While the country is one of the most biodiverse regions in the world, the implementation of various measures outlined in the National Biodiversity Strategy and Action Plan has been insufficient due to weak coordination among stakeholders and inadequate funding and capacity within government agencies.						[Strategy] Through support for improving public health, enhancing living environments, and conserving the natural environment, Japan aims to promote the formation of a circular society in vulnerable island nations. As part of efforts to improve waste management in line with the Pacific Regional Waste and Pollution Management Strategy "Cleaner Pacific 2016-2025" developed by the Secretariat of the Pacific Regional Environment Programme (SPREP), Japan will support the enhancement of waste management and mining waste administration capabilities in the capital city area (NCD) and regional towns in PNG. In addition, Japan will support strengthening governance of protected area management at the national level and the sustainable management of natural resources by local communities in model protected areas. In these efforts, Japan will also consider biodiversity conservation, taking into account the "Kunming-Montreal Global Biodiversity Framework" adopted at the end of 2022.

Development Issue3-2 Climate Change, Disaster Prevention	[Background and current situation] Despite having some of the world's most significant tropical forests, PNG has recently seen increased forest loss and degradation, primarily due to small-scale agricultural development and logging. In order to promote sustainable forest management, a National Forest Information Management System has been established with JICA's support, but it is not yet fully sufficient to meet the practical needs of forest administration. Following the adoption of the Paris Agreement in 2015, developing countries, including PNG, are now required to take concrete actions toward emission reduction targets and provide regular reports. Therefore, there is a need for a stable creation of the GHG inventory to understand the country's greenhouse gas emissions situation and the capacity building to improve its accuracy. As part of climate change mitigation measures (such as reducing emissions and increasing absorption), enhancing the capacity of relevant agencies in the forest and climate change sectors is an urgent priority. Additionally, in terms of adaptation measures (such as preventing or mitigating damage from predicted climate change impacts), it is crucial to promote cooperation on disaster prevention measures.						[Strategy] Incorporating the concept of Nature-based Solutions (NbS), Japan will enhance the capacity for sustainable forest management in PNG by continuously updating forest information, effectively utilizing the National Forest Resource Information Management System, and improving the capacity for monitoring GHG emissions from forests. Also, Japan aims to strengthen the ability to regularly create and improve the GHG inventory, as well as to promote understanding among relevant agencies. Additionally, Japan will continue to implement projects that contribute to disaster prevention measures, such as the development of climate-resilient infrastructure, tailored to the country's vulnerability to climate change and natural disasters.
